

The new Magical® Spring Deutzia is a superb, double white flowering shrub, ideal for use as cut foliage. Best picked in the mature bud stage. At this point it gives the most wonderful look, even before the flowers open.

The Deutzia is a quick growing, deciduous shrub that can withstand cold winter conditions and can be grown successfully throughout New Zealand. Any average soil conditions will suit. Because Deutzia's are vigorous growers, attention to pruning after flower harvest is essential to produce next season's quality stems. A hard prune is required.

Particular attention should also be given to the Post Harvest treatment.

Deutzia Magical® Spring

Large white flowers in late spring.

Non propagation agreement.
