

Magical® Hypericum

The Magical® series of Hypericum are the new generation of Hypericum bred in Holland and now released worldwide for the cut flower trade. The huge advantages from the old rust riddled varieties are:

- **Rust resistant.** Most of the Magical® Hypericum are either highly rust resistant or completely rust free. Even with an attack of rust on these new generation types, it is very easily removed. You just can't compare them with old varieties and the huge problem of trying to clean up the rust.
- **Leaf scorch.** It has been a major problem in the old varieties and leaf scorch gave the appearance of "old" looking leaves. The new generation of Magical®'s do not have this problem and so the leaves below the berries always look fresh and clean.
- **Colours.** New, exciting colours have now appeared along with bigger and brighter red and pink berries. Colours that stand out are green, white, violet, orange and other colours for 'niche' markets.
- **Vigour.** Many of the new Magical® Hypericum give an excellent crop on strong 80cm to 1 metre stems the first year – whereas you normally had to wait until the second season on the older varieties.

Hypericum Magical® Beauty (Kolmbeau ^{PVR granted})

An absolutely top of the range Hypericum with large, salmon pink berries. Very early.

From Kolster BV - non propagation agreement.
QFP®

Hypericum Magical® Fire (Kolmfir)
